PROFILE

Systems Analyst at Tata Consultancy Services delivering a core banking front-end transformation for a leading Taiwanese commercial bank. Translates ambiguous business needs into clear functional designs, structures problems through gap analysis, and aligns client, Taiwan and India teams to move decisions forward. Brings a business-and-technology education (MIS; Digital Content & Technologies, NCCU) and hypothesis-driven research training in experimental design and statistical analysis.

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS), Taiwan Branch Taipei

Systems Analyst Dec 2025 – Present

Core banking front-end implementation for a leading Taiwanese commercial bank

- Own business requirements analysis for the shared-services workstream, translating client needs into Functional Specification Documents (FSDs); have taken ~15 transaction functions end to end — from requirement interviews and UI flow design through client walkthroughs, development, showcases and deployment.
- Performed gap analysis between the legacy system and the new product across 14 existing transactions, consolidating open issues and resolution decisions into the basis for client sign-off and product adjustments.
- Serve as primary owner of the User Management System (UMS) rollout — users, roles, permissions, organization hierarchy, audit and authorization — converting the bank's legacy access-control rules and workflows into an implementable design.
- Write API specifications and design UI process flows, keeping development aligned with agreed requirements; host client briefing sessions to walk business users through new functions before build.
- Act as the bridge between the client, the Taiwan project team and the India product team, clarifying functional gaps and aligning requirement details to drive product changes.
- Run functional validation in test environments; maintain bilingual (Chinese/English) issue logs and track defects to resolution across all three parties.

RESEARCH EXPERIENCE

Master's Thesis, National Chengchi University Taipei

The Impact of Changing Avatar Nationality in VR on Foreign Language Public Speaking Anxiety 2025

- Framed a hypothesis-driven study (6 hypotheses) testing whether embodying a native-English-speaker avatar in virtual reality reduces English public-speaking anxiety, and whether self-concept and self-efficacy explain the effect.
- Designed and ran a between-subjects experiment with 68 participants: built the VR classroom scenario on the VRChat SDK for Meta Quest 2, piloted it with 8 participants to validate scale reliability, and refined stimuli and procedures based on pilot feedback.
- Analyzed results with independent-samples t-tests, linear regression, Implicit Association Test (IAT) scores and bootstrapped mediation analysis (Hayes PROCESS v4.0, 5,000 resamples); turned null findings into design recommendations for VR-based language and speech training.

National Chengchi University, Psychology & Media Lab Taipei

Research Assistant Aug 2023 – Jun 2024

- Supported experiment execution for research projects on how virtual reality and web media affect human behavior, cognition and emotion.
- Sourced, screened and synthesized academic literature into structured summaries that informed the team's research design.

EDUCATION

National Chengchi University (NCCU) Taipei

Master's Degree, Digital Content and Technologies Sep 2022 – Feb 2025

Bachelor of Business Administration, Management Information Systems Sep 2018 – Jun 2022

SKILLS & LANGUAGES

Business Analysis	Requirements elicitation, gap analysis, functional specifications (FSD), API specifications, UI flow design, testing & defect tracking
Research & Analytics	Hypothesis framing, experimental and survey design, statistical analysis (t-tests, regression, mediation analysis), literature review
Technical	C# (OOP), Java, Python, SQL; HTML5, CSS, JavaScript, PHP, Bootstrap; Unity, Android Studio, Arduino
Languages	Mandarin (native); English (professional working proficiency, TOEIC 920)
